### Ultra-wide UHD resolution

Acer CZ340CK A monitor provide stunning image quality and sharp details with 3440 x 1440 resolution. Through the ultra-wide resolution, users can enhance the work efficiency easily and enjoy the visual experience by this monitor.

### Radeon™ FreeSync™ Technology

With Radeon™ FreeSync™ Technology, the game's frame rate is determined by your graphics card, not the fixed refresh rate of the monitor. This means the monitor's frames are synced with the graphics card's frames, which eliminates screen tearing and delivers very smooth viewing experiences.

### Curved 21:9

The curved screen puts every corner of the screen at the same distance from the user's eyes, providing a uniform viewing experience and reducing eye strain during long periods of viewing.

### 100% sRGB wide color gamut

A color gamut is a subset of colors, such as those in a specific color space. The gamut of a device is that portion of the color space that can be represented. 100 % sRGB color coverage can store a large color space, which is able to produce, or present a wider range of colors on screen.
